CUSTOM SOLUTIONS FOR EVERY APPLICATION

From farming to forestry, construction to concrete – and everything in between – having a custom lube truck solution offers unmatched benefits that directly impact your bottom line. We know that efficiency on the job translates into profitability, and each of our custom fuel & lube trucks are built with that in mind.

We base our builds on a formula rooted in integrity: include what's needed, and not what isn't. While other manufacturers require you to purchase a set-in-stone layout (which often includes components you may not need or use), our team custom designs your lube truck to meet your specific product, output, job site, equipment, and climate needs.

For builds with especially unique requirements, we strategically source and incorporate whatever equipment is necessary to ensure your lube truck does exactly what it's meant to do: **work for you.**

STARTING IN THE RIGHT DIRECTION

While all of our trucks are custom builds, we have a standard line of fuel-lube bodies & layouts to get you started in the right direction. All of our "starter" truck layouts come with a fuel system, various product tank capacities, storage, toolboxes, filter drain pans, compressors, lube drums, & work lights.

- Six storage boxes & interior storage shelving

BUILDING BETTER FOR OVER 30 YEARS

Family owned and operated since 1987, Taylor Pump and Lift is dedicated to expertly crafting mobile lube equipment with exceptional quality, unmatched operational longevity, and set ups that *just work right*.

Our founder, Jeff Taylor Sr., envisioned a business that operates on honesty, authenticity, and expertise. This mindset translates into not only our lube products, but into our customer experience as well.

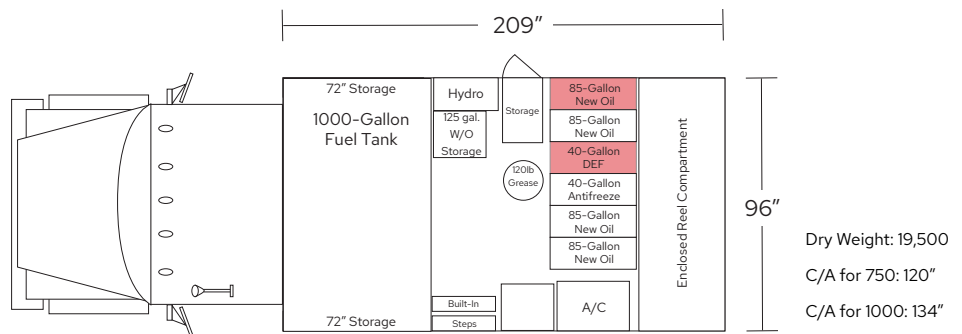

"When experience drives quality, great things happen."

Custom Design Example:

This TPL 4417 design mockup includes the addition of an 85-gallon new oil tank & 40-gallon DEF tank.

Additional Considerations:

- Total weight (when full)
- Overall balance of the truck
- Ease of access for filling

SPECIALTY TRUCKS

16' Side-Entry Body

TPL 7717 Series Asphalt Service Truck

- 600-gallon poly H2O tank
- 200-gallon fuel tank

- 250-gallon waste oil tank
- One 60-gallon antifreeze tank
- One 120 lb. chassis lube drum
- DEF system available
- 3-4 side storage compartments with roll-up doors

OUR FIVE STEP BUILD PROCESS

Assess Needs

We work with you to determine your needs and budget, creating an accurate quote.

Design

We draft a product design, including all equipment, & then select paint colors.

Build

We meticulously fabricate and pre-fit all equipment, then complete paint and final detailing.

Test

We thoroughly test all products to ensure proper installation and functionality.

Delivery

Products are completed & ready for pick-up once final payment is received.
