# EFFICIENT FLUID MANAGEMENT SYSTEMS

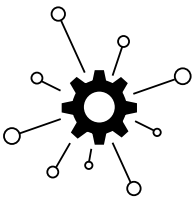

Businesses across every industry that utilize moving equipment to get the job done require some kind of maintenance mechanism - whether it be on-site, or at a centralized maintenance facility. Within these shops, fluid management systems offer the effective servicing of fleet vehicles and equipment while also efficiently and accurately managing their oil, gear lube, and coolant fluid.

## CUSTOM SOLUTIONS ARE OUR SPECIALTY

With over 30 years experience in the lubrication industry, Taylor Pump and Lift is well-acquainted with the unique challenges that come with the design and installation of a free-form or managed lubrication system. Our team offers one-on-one consultation throughout your project - from the initial quote to final inspection day. So what makes us different from our competitors?

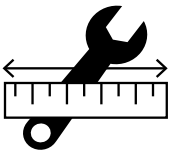

***We're a one-stop solution that prioritizes customer experience.***

### ***Specialized System Building***

While others offer conventional, outdated standard "plans" that are pieced together, our team specializes in custom system building. We specifically design each install to meet your unique layout, fluid product, and business needs. Whether it's a full management system or a simple tank package, our team delivers the best in both product and service.

### ***Customized Components***

Instead of hinging on whatever parts may be available in a warehouse, our fabrication capabilities allow us to construct unique, custom components - including bracketry, spacers, lines, and hoses. These can play an integral part in how your system functions and, ultimately, affects output.

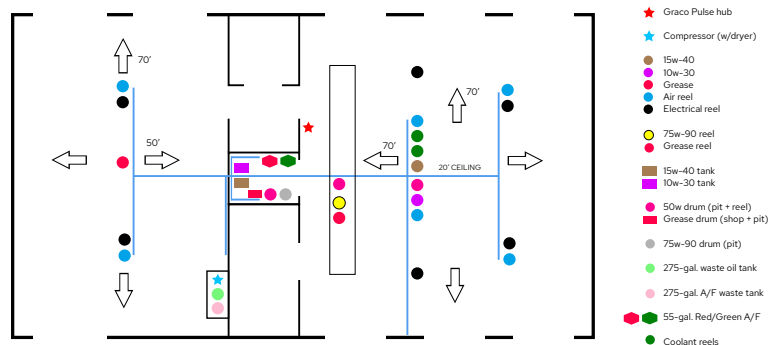

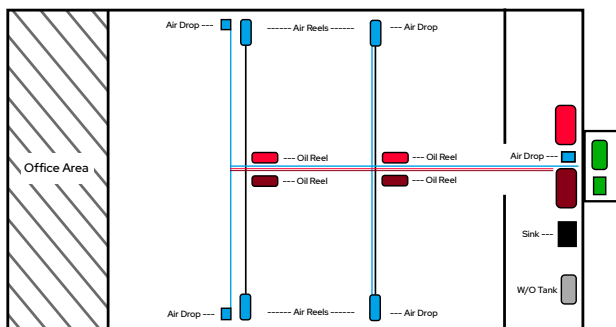

### ***In-House Warranty Management***

While others may leave you to manage any warranty issues directly with a part's manufacturer, our team offers liaison service to save you time, frustration, and cost. Our goal is to not only build you a custom system to create profitability, but build trust in our ongoing relationship with our customers.

## DESIGN, DOWN TO THE DETAILS

Once your business needs have been established, our team will construct a detailed outline of where your fluid management equipment, tanks, reels and brackets, and hoses will be placed. This essentially provides a topographical view of what the shop will look like, but also *how* it will best function, based on ergonomics and existing structural elements. Layout clarity is vital to a successful installation.

**GRACO PULSE®**  
**PRO SYSTEM**

Leveraging our tenured relationship with Graco, we offer cutting-edge fluid management technology installation alongside the physical tanks, piping, etc. The Graco Pulse® Pro Fluid Management System is designed with the user in mind. Simple and versatile, it allows managers and key stakeholders to monitor the business and access reporting from any network-connected device. Reporting contains usage by fluid type, volume, location, and time dispensed, as well as financial insights and bulk fill tracking.

Our team is certified to install and set up the Graco Pulse® system, making your project turn-key from the moment we turn it over to you. Our goal is to increase your productivity and profitability via the best possible fluid management solution for your business.
